

testing::Test

```
classDiagram
    class testing__Test["testing::Test"]
    class FileReaderTest
    FileReaderTest --|> testing__Test
```

The diagram illustrates a class hierarchy. At the top is a box for 'testing::Test' with two empty slots below it. Below this is a larger box for 'FileReaderTest' containing a list of test cases and methods. A blue arrow points from the 'FileReaderTest' box up to the 'testing::Test' box, indicating that 'FileReaderTest' inherits from 'testing::Test'.
