

nixoncpp::logging::  
LoggerFactory::create

```
graph LR; A[nixoncpp::logging::LoggerFactory::create] --> B[nixoncpp::logging::LoggerFactory::createConsole]; A --> C[nixoncpp::logging::LoggerFactory::createNull];
```

The diagram illustrates a function call branching into two possible outcomes. A gray box on the left represents the initial function call, which then branches via blue arrows into two white boxes on the right, representing the two possible return paths or states.

nixoncpp::logging::  
LoggerFactory::createConsole

nixoncpp::logging::  
LoggerFactory::createNull
